

Lecture Notes on Environmental and Natural Resources
Economics

Cesaltina Maria Pacheco Pires

April 1998

CONTENTS

1	Introduction	5
1.1	How are economy and natural environment related?	5
1.2	Sustainability	7
1.3	Issues in Environmental Economics	9
1.3.1	Environment and Growth	9
1.3.2	Environmental Degradation and its Causes	9
1.3.3	The Global Environment	12
2	Valuation Methods	14
2.1	Fundamentals of Environmental Valuation	14
2.1.1	Environmental Impact Assessment	15
2.1.2	Concepts in Welfare Economics	16
2.1.3	Welfare Economics under Risk and Uncertainty	20
2.1.4	Benefit Cost Analysis and Discounting	25
2.2	Total Economic Value and Valuation Methods	27
2.2.1	Total Economic Value	27
2.2.2	Methods for Measuring Economic Value	30
2.3	Productivity Based Methods	33
2.3.1	Related Methods	35
2.3.2	Applications	36
2.4	Contingent Valuation	37
2.4.1	Steps in CVM	37
2.4.2	Problems with CVM	40
2.4.3	Applications	41
2.5	Travel Cost Method	42
2.5.1	Theoretical Foundations	42

2.5.2	Individual Travel Cost Method	43
2.5.3	Concentric Zone Model	44
2.5.4	Simple Travel Cost Method	45
2.5.5	Multiple Site Travel Cost Method	49
2.5.6	Generalized Travel Cost Method	50
2.5.7	Hedonic Travel Cost Method	50
2.5.8	Problems with Travel Cost Method	51
2.5.9	Applications	52
2.6	Hedonic Price Method	52
2.6.1	Theoretical Foundations	53
2.6.2	First Step - Hedonic Price Equation	54
2.6.3	Step Two - Computation of Marginal Values of Attributes	56
2.6.4	Step Three - Estimate the Demand Curve of the Characteristic	57
2.6.5	Problems with Hedonic Price Method	59
2.6.6	Applications	60
2.7	Repeat Sale Method	60
2.8	Methods to Value Risks to Life and Health	61
2.8.1	Valuing Reduced Mortality Risk	63
2.8.2	Valuing Reduced Morbidity	67
2.9	Applications	70
3	Economics of Environmental Regulation	71
3.1	Types of Pollutants	71
3.1.1	Definition and Taxonomy of Externalities	72
3.2	The Optimal Level of Pollution	73
3.3	Decentralized Solutions to the Externality Problem	76
3.3.1	Bargaining Solution	76
3.3.2	Liability Laws	78
3.3.3	Moral Suasion	79
3.4	A Brief Description Some Instruments	79
3.4.1	Taxes	79
3.4.2	Standards	79
3.5	Criteria for Selecting Environmental Policy Mechanisms	79

3.6	Command and Control Policies: Standards	81
3.6.1	Introduction	81
3.6.2	The Economics of Standards	82
3.6.3	The Economics of Enforcement	86
3.7	Incentive Based Policies	86
3.7.1	Emission Charges or Emission taxes	87
3.7.2	Abatement Subsidies	94
3.7.3	Transferable Pollution Permits	96
3.7.4	Uncertainty and the Choice of Instruments	100
4	Natural Resources	105
4.1	Property Rights Regimes	105
4.1.1	Taxonomy of Property Rights	105
4.1.2	Desirable Properties of Property Rights	105
4.1.3	Common-Property vs Open-Access	106
4.1.4	Open Access Problem	108
4.1.5	Common Property	109
4.2	Land Rents,Rent Gradient	110
4.2.1	Quality of Land and Rents	110
4.2.2	Location and Rents	113
4.3	Nonrenewable Resources	118
4.3.1	The Theory of the Mine	118
4.3.2	Extraction by a Competitive Industry	122
4.3.3	Extensions of Previous Model	124
4.4	Forestry	125
4.4.1	Some Biological Facts	126
4.4.2	When Should Forest be Harvested?	127
4.4.3	Government Policies and Optimal Timber Rotations	132
4.4.4	Concessions of Public Forest	133
4.4.5	Deforestation	133
4.5	Fisheries	135
4.5.1	Harvest Production Function	137
4.5.2	Harvest Under Open Access	139

4.5.3	Optimal Harvest Under Private Property Rights	140
4.5.4	Industry Supply Curve	142
4.5.5	Introducing Dynamics	143
4.5.6	Regulation of the Fishery	145
4.6	Water	149
4.6.1	Efficient Allocation of Surface Water	150
4.6.2	Efficient Allocation of Ground Water	151
4.6.3	Allocating and Pricing Water in Practice	151
4.6.4	Water Contamination	154
